**JAMAICA CONSTABULARY FORCE**  
*Information Security Policy*

## **1.0. Purpose**

The purpose of this policy is to outline how the Jamaica Constabulary Force (JCF) will seek to formalize the implementation of the Information Security Management System to enhance the efficiency and general credibility of the Force. It delineates how police personnel will utilize varied ICT technology to manipulate, manage and control the general roles and functions of the operation of the JCF in combatting Crime. These technological resources can only positively impact the society creating an atmosphere with better alacrity effecting greater efficiency and more effective policing.

## **2.0. Scope**

This Policy shall apply to all members of the JCF who will be required to use, care and maintain all information security management systems to include hard and software technological equipment and accessories. It specifies requirements for the implementation of security controls customized to meet the needs of the Technology Branch and by extension the JCF. The information security system is designed to ensure the selection of adequate and proportionate security controls that protect information assets and give confidence to interested stakeholders.

Police officers who will be so assigned any ICT equipment and or accessories whilst on tour of duty shall be responsible for the proper handling and manipulating of all related ICT accessories guided by the Technology Branch outlined in this policy. All assigned Police Officers will ensure that the proper protocol practices are maintained in treating with the general care and effective functioning of all ICT equipment and accessories. The Technology Branch is solely responsible for the general management and maintenance of same. This is in keeping with directives from the Commissioner of Police in the care and handling of all government properties.

## **3.0. Background**

The Jamaica Constabulary Force is experiencing an increasing demand to investigate cybercrimes and handle the ever-increasing volume of digital crimes. Consequently, many law enforcement agencies worldwide have implemented technologies such as big data systems to control crimes. While ICT can create new possibilities in crime-fighting efforts, the development, implementation and application of technologies have brought about new threats and vulnerabilities for the Force.

The high incidence of crimes in Jamaica over recent years has raised concerns nationally and internationally. In this regard, the Government of Jamaica has outlined plans to modernize the Jamaica Constabulary Force (JCF) through the use of crime-fighting

## **JAMAICA CONSTABULARY FORCE**

### *Information Security Policy*

technologies. Therefore it is the mandate of the Technology Branch through the JCF to modernize and enhance the strategic and operational capabilities of the JCF at large to combat new crimes to include cybercrime. One of the primary roles of the JCF is the maintenance of law and order. Therefore factors that are impacting the tactics and strategies of the Crime and Operations Portfolios within the JCF will experience a metamorphosis - seeking to implement new technologies to control crimes. There are concerns of uncertainties that surround how technology, particularly cybersecurity, definitively reshapes or redefines police practices and policies (Lanier and Cooper, 2016). Contemporary law enforcement, as practiced worldwide, largely depends on a plethora of technologies to control crimes.

Technologies such as digital surveillance using CCTV Systems have moved beyond visual monitoring of activities in public spaces to an era in which electronic communications such as emails and voice are being monitored by law enforcement. Moreover, many citizens in the United States, for example, have come to accept this “intrusion” as a necessary part of daily life. On the other hand, traditional policing, as practiced by some police department in the Caribbean, relies on manual paper-based systems. It would thus be useful to evaluate how technology and cybercrimes impact the policies and practices of Police departments they modernize through technology (Lanier and Cooper, 2016).

The Information Security Policy is geared at meeting the International Standard Model for establishing, implementing, operating, monitoring, reviewing, maintaining and improving an Information Security Management System within the JCF. The adoption of information security management system is a strategic decision for the Force. The design and implementation of the Force’s ISMS is influenced by its needs, objectives, security requirements, the processes

employed and the size and structure of the organization. These and their supporting systems are expected to change over time. It is expected that an ISMS implementation will be scaled in accordance with the needs of the organization. It is aligned with ISO 9001 in order to support the consistent and integrated implementation and operation with related management standard.

The ISMS is designed to enable the Technology Branch and by extension the JCF to align its practices with related information management system requirements. The ISMS implementation is being created to compliment the needs of the organization, e.g. a simple situation requires a simple ISMS solution. An organization needs to identify and manage many activities in order to function effectively. Any activity use to manage

### *Information Security Policy*

resources in order to enable the transformation of inputs into outputs can be considered to be a process. Often the output from one process directly forms the input to the next process.

The application of a system of processes within an organization, together with the identification and interactions of these processes, and their management, can be referred to as a “process approach”. The process approach for information security management presented in this Information Security Policy encourages its users to emphasize the importance of:

- i. Understanding the JCF’s information security requirements and the need to apply policy and objectives for information security;
- ii. Implementing and operating controls to manage the JCF’s information security risks in the context of the organization’s overall business risks.
- iii. Monitoring and reviewing the performance and effectiveness of the ISMS; and continual improvement based on objective measurement.

In applying an ISMS policy, objectives, processes and procedures relevant to managing risk and improving information security to deliver results in accordance with the organization’s overall policies and objectives are :- the following has to be practiced:

- i. Implement and operate the ISMS policy, controls processes and procedures.
- ii. Assess where applicable, and measure process performance against ISMS policy, objectives and practical experience and report the results to management for review.
- iii. Take corrective and preventive actions, based on the results of the internal ISMS audit and management review or other relevant information, to achieve continual improvement of the information security system.

#### **4.0 Policy Statement**

It is the policy of the J.C.F that:

- i. specific types of Information Systems will be utilized to increase organization efficiency and productivity,
- ii. keeping in mind the various risks involved in the use of Information Systems, the organization shall comply with best practices of well recognized or mandated risk management and information security frameworks to ensure effective risk management and Information Security.

*Information Security Policy*

## **5.0 Objectives**

The objectives of the implementation of the Information Security Management System are as follow:

- 5.1 To establish ISMS processes and procedures relevant to managing risk and improving information security to deliver results in accordance with the Force's overall policies and objectives.
- 5.2 To implement and operate the ISMS policy, controls processes and procedures.
- 5.3 Assess and, where applicable, measure process performance against ISMS policy, objectives and practical experience and report the results to management for review.
- 5.4 Take corrective and preventive actions, based on the results of the internal ISMS audit and management review or other relevant information, to achieve continual improvement of the ISMS.
- 5.5 Improve public order, safety and security across the island.
- 5.6 Assist in the deployment of general resources, as also to increase in the efficiency in law enforcement.
- 5.7 Aid in the monitoring of virtual traffic activities in accordance with the relevant legislation.

## **6.0 Definitions**

### **6.1 Information Security Management System (ISMS):**

That part of the overall management system, based on a business risk approach, to establish, implement, operate, monitor, review, maintain and improve information security.

### **6.2 Asset:**

Anything that has value to the organization.

### **6.3 Availability:**

The property of being accessible and usable upon demand by an authorized entity.

### **6.4 Confidentiality:**

The property that information is not made available or disclosed to unauthorized personnel, entities, or processes.

### **6.5 Information Security:**

Preservation of confidentiality, integrity and availability of information; in addition, other properties such as authenticity, accountability, non-repudiation and reliability can also be involved.

**JCF Information Security Policy**

**JAMAICA CONSTABULARY FORCE**  
*Information Security Policy*

**6.6 Information Security Incident**

A single or a series of unwanted or unexpected information security events that have a significant probability of compromising business operations and threatening information security.

**6.7 Integrity**

The property of safeguarding the accuracy and completeness of assets.

**6.8 Risk Analysis**

The systematic use of information to identify sources and to estimate the risk.

**6.9 Risk Assessment**

The overall process of risk analysis and risk evaluation.

**6.10 Risk Management**

The coordinated activities to direct and control an organization with regard to risk.

**6.11 ALPR**

Automated License Plate Reader

**7.0 Guidelines for the Use, Care and Maintenance of the ISMS – the distribution of Technological Accessories in accordance with Policy**

As indicated by the International Association of Chiefs of Police (2017), the unauthorized access or loss of law enforcement data due to a cyber-attack has serious operational and privacy implications as it can compromise a Police Department's ability to protect life and maintain order.

Organizational transformation/modernization has inherent threats and vulnerabilities that invariably challenge the entity's continued viability. Law enforcement's transformation/modernization is no exception, and when driven via technology, there can be significant threats and vulnerabilities.

Notwithstanding there are basic procedures and guidelines of operation in the use, care and maintenance of the Government's technological accessories that have been instituted since the inception of the Technology Branch that has sought to enhance the efficiency and productivity of the roles and functions of the Branch and by extension the JCF. Any breach of this policy will be treated as a breach of discipline and shall be dealt with in accordance with the disciplinary procedures laid down in the Police Service Regulation 1961.

**JAMAICA CONSTABULARY FORCE**  
*Information Security Policy*

**7.1 USER'S GUIDE & PROCEDURES**

- 7.1.1 The implementation of the ISMS will operate within the applicable laws of Jamaica. The rights for citizens' privacy and family life will be acknowledged at all regards. The Information Security Policy prohibits the arbitrary monitoring of individuals targeted for non-legal purposes and or discriminatory grounds such as race or gender.
- 7.1.2 The Technology Branch is responsible for the overall training in the use, care and maintenance of all affiliated technological accessories/solutions attached to the Information Security Management System.
- 7.1.3 The Technology Branch is responsible for accessing and retrieving all uploaded software taken from the server for legitimate use.
- 7.1.4 Total use and care of the Information Security Management System (ISMS) shall be the responsibility of the user's so designated to access all technological accessories assigned by the Technology Branch.
- 7.1.5 All configuration and or testing of all technological accessories/solutions will be carried out by certified designated authorized personnel attached to the Technology Branch and or so assigned.
- 7.1.6 All technological accessories attached to the ISMS analysis shall be conducted in accordance with the ISO 9001 recommended guidelines, force training and policy manual.
- 7.1.7 The Branch is to conduct periodic inspection, reviewing of all software analysis that has been administered in an effort to continuously improve and better the system.
- 7.1.8 Users of the ISMS are prohibited to obtain information relative to any person or group for purpose of harassment or intimidation.
- 7.1.9 Sensitive information concerning the privacy rights of individuals shall be prohibited from infringing on these rights. This policy embraces the protection of personal privacy at all juncture.
- 7.1.10 Users of the ISMS are prohibited to obtain information to be exchanged for any form of gratuity.

## **JAMAICA CONSTABULARY FORCE**

### *Information Security Policy*

- 7.1.11 Users of the ISMS are prohibited to obtain information for personal or malicious use.
- 7.1.12 Information obtained from the ISMS will only be disseminated to departments of the Jamaica Constabulary Force and any other approved agency solely approved by the Commissioner of Police and or his designate only for legitimate purposes.
- 7.1.13 Any detected malfunction of any technological accessories shall be immediately conveyed to the Technology Branch by virtue of the HELP DESK at (876) 984-8324 or (876) 984-TECH.
- 7.1.14 Once there is evidence of system failure, the so assigned user is responsible for communicating the defect to Technology Branch HELP DESK at (876-984-TECH)

## **7.2 REQUEST FOR DATA – COURT**

- 7.2.1 For all reported and documented crimes requiring the retrieval of recovered material and or evidence, the initial request must be made by the Superintendent of Police from the Division, Branch and or Formation, outlining the purpose for same.
- 7.2.2 The procedure will be guided by the parameters set by the DCP Force Development and Logistics Portfolio or his designee – ACP Technology Branch. Initial searches shall be intelligence-led and will focus on the areas directly specified. For expediency in viewing and or accessing these data material(s) a portal or email system will be in place to facilitate requests. This may be done by completing a provided form that may be uploaded. The responses will also be facilitated in like manner.
- 7.2.3 The requested data material(s) in establishing relevance for its' lawful release will be reviewed by the DCP Force Logistics and Development Portfolio and or his designate – A.C.P Technology Branch. The original copy shall be given an exhibit number and sealed using the authentic ISMS labels. It shall be suitably stored and fully documented on an exhibit form/log. All other copies or edited data material compilations must be separately exhibited. Be it known that the Technology Branch will work in collaboration with the Communication Forensic Cyber Crime Division. (C.F.C.D) who's role and function is to assist with the extraction of data in this regard.

**JAMAICA CONSTABULARY FORCE**  
*Information Security Policy*

## **8.0 LEGISLATION AND GUIDANCE**

Be it known the evidential value that all data retrieved from the ISMS shall be treated in compliance with the following legislations and ethical background here under:

- 8.0.1 Evidence (Special Measure) Act 2012
- 8.0.2 JCF Handling and Exhibits Policy
- 8.0.3 JCF S.O.P for Communication Forensic and Cybercrime Unit (CFCU)
- 8.0.4 JCF Digital Media Policy
- 8.0.5 JCF Digital Photography S.O.P
- 8.0.6 The Universal Declaration of Human Rights
- 8.0.7 Access to Information Acts 2004
- 8.0.8 JCF Ethics and Integrity Policy
- 8.0.9 The Cybercrime Act

## **9.0 PRIVACY PROTECTION**

Be it known that information will only be disclosed upon request and shall comply with the legislations listed within this Policy. Procedures governing gathering, retention, use and disclosure of information shall be held in strict confidentiality and will adhere to the relevant legislations accordingly.

## **10.0 Roles and Responsibilities**

### **10.1 The Inspectorate and Professional Standards Oversight Bureau: The IPROB shall have responsibilities for:**

- 10.1 Maintenance of standards in the operations of ISMS within the wider the JCF.
- 10.2 The commencement and completion of audit activities with all related and associated
- 10.3 Technological equipment and or accessories to include Log/Release Sheets and other related materials through the approval of the ACP in charge of Technology Branch.
- 10.4 The provision of an independent body affecting continuous review and checking mechanism for all related Technological equipment and Accessories Island wide.
- 10.5 Reporting/investigating of detected breaches of the Policy and extend recommendations forthwith.

*JAMAICA CONSTABULARY FORCE*  
*Information Security Policy*

**10.2 The Technology Branch:**

**The Technology Branch and its Research, Policy and Training Unit shall be responsible for:**

- 10.2.1 Recommending the types, specification and capabilities of all ISMS related accessories and data to be used by Authorized Personnel of the JCF.
- 10.2.2 Ensuring that all related systems operating under the management of the ISMS are in compliance with the specified spectral band.
- 10.2.3 Ensuring that all JCF operated ISMS and accessories Island-wide is in good working condition.
- 10.2.4 The involvement of all technical reviewing of any proposed system expansion/upgrade, commissioning and testing protocols.
- 10.2.5 Conduct continuous research on evolving technology practices and all introduced amendments to related legislation and where necessary inform changes to maintain operational and legislative compliance.
- 10.2.6 The Research, Policy and Training arm of the Technology Branch shall be responsible for: Conducting timely reviews and updates of the Information Security Policy and S.O.P.
- 10.2.7 Conducting feasibility studies and undertakes impact assessment of new policies.
- 10.2.8 Interface with Stakeholders to bench mark research methodologies and best practices.

**10.3 The DCP in charge of Force Development and Logistics Portfolio:  
The DCP FDLP shall be responsible for:**

- 10.3.1 The general monitoring of all ISMS and technological equipment within the wider J.C.F.
- 10.3.2 All ISMS and technological equipment have successfully completed the due process of system certification under the Ministry of National Security and the wider JCF.
- 10.3.3 Only trained certified system operators of the ISMS are allowed to monitor, handle or access classified data – under approval granted by the Commissioner of Police and or his designate.

## **JAMAICA CONSTABULARY FORCE**

### *Information Security Policy*

10.3.4 Reviewing of classified data materials by authorized personnel.

10.3.5 All requested classified data material(s) shall be reported to D.C.P Force Development and Logistics immediately and logged accordingly. (Appendix A)

10.3.6 Regular professional servicing, updating and maintenance of all technological assets and equipment island-wide is schedule in accordance with the manufacturer's guidelines so supervised by the Technology Branch/Telecommunication Division or its' approved designee.

#### **10.3.6.1 INCIDENT RESPONSE:**

- Incident identification
- Detection, analysis, and remediation
- Containment, eradication, and recovery
- Post incident activity

#### **10.4 REPORTING FAULTS & DEFECTS:**

10.4.1 The Technology Branch in collaboration with Telecoms Division are responsible for making and or causing an entry to be made in the E -diary in respect to daily recordings of Data analysis and or occurrences. Periodic system checks will also be made on a daily basis.

10.4.2 The Technology Branch will collate and tally all reported and or recorded faults across the Divisions, Branches and Formations with respect to:- obstructions and any other system related issues to the F.D.L.P. H.Q.

10.4.3 An electronic file will be maintained to track all processes.
