

JAMAICA CONSTABULARY FORCE
Technology Branch Maintenance of Software Response Procedures

Title: JCF Technology Branch Maintenance of Software Response Procedures	Identification Code: JCF/TECB-ICTD/PR/SSs/0001/2021
Effective Date: 2024-October-28	Pages: 3
Last Reviewed: 2024-October-24	Distribution: Technology Branch
Revision version #: 1	Process Owner: ACP Technology Branch
Rescinds: 2021-Oct-1	
Authors: Technology Branch, ICTD,	Owner: JCF
Publication: 2024-October-28	Review: Biennially

1.0. Purpose

The purpose of this document is to establish procedures for enhancement and optimization for software applications & to improve performance.

2.0. Scope

The ICTD has responsibility to maintain & modify the software applications developed within the branch. Structural changes to the source code of Off the Shelf (OTS) applications used within the JCF is not within the remit of the division.

3.0. Acronyms and Abbreviation

SA/SE	System Analyst/Software Engineer
WA	Website Administrator
PG	Programmer
OTS	Off the Shelf
RGS	Requirements Gathering Session
PSM	Perfective Software Maintenance (An evolution of requirements and features to an existing software application)
ASM	Adaptive Software Maintenance

4.0. Description of Activities [Procedures]

- 4.1.** SA/SE/WA/PG Receive general request from stakeholders regarding modification of software applications via direct phone calls from the stakeholder or the helpdesk (NB. Calls are redirected to the helpdesk).

Comment [SA1] *The end-users from Division/Branch that initially requested the software application.*

- 4.2.** SA/SE /WA/PG Establish communication with the stakeholders to set up a RGS.

- 4.3.** SA/SE /WA/PG Determine what modifications & advancements are to be made to software applications.

- 4.4.** SA/SE/WA/PG Conduct a feasibility assessment based on the information collected at RGS. If the request is not feasible i.e. cannot be done in-house, then an external solution is sought and the stakeholder is informed via the corresponding medium used.

- 4.5.** SA/SE/WA/PG Proceed towards conducting a PSM.

- 4.6.** SA/SE/WA/PG Conduct a test on the modifications made to the application software to determine whether all the requirements outlined by the stakeholders are met.

- 4.7.** SA/SE /WA/PG Deploy the upgraded software application to production.

Comment [SA2] *Various checks (unit testing etc.) are done in the testing stage before deployment to live production. We test to ensure modifications meet the new requirements and that the fundamental structure and functionality of the application software remains stable. After which, stakeholders are notified when to expect the required modifications at the nearest possible time as indicated by the systems department team (deployment to live*

production takes places on a non-working day (weekend or holiday). Additionally, we will inform the stakeholders of system downtime date and time to facilitate the deployment).

- 4.8.** SA/SE/WA/PG Communicate to the stakeholders to confirm the changes made to the software application via the corresponding medium used by the stakeholder.

General Maintenance Procedure

- 4.9.** SA/SE/WA/PG Conduct general maintenance in terms of addressing errors and faults. Perform ASM to ensure software application is adaptive to both hardware & software changes. Conduct optimization, software patches & updating documentation as needed.
