1. INTRODUCTION

1.1. The Curriculum Development and Coordination Unit, (CDCU) pursuant to its mandate to annually review the Force's training needs and design new courses shall perform training needs analysis, (TNA) in line with the Jamaica Constabulary Force workforce management requirements. Training is one of an organization's most important strategies for attaining its goals. In order for training to be effective, decisions must be based on reliable data about the quality of performance expected of an organization's workforce and the variances therein. While training is a valuable tool, organizational and workforce performance gaps should not automatically be thought of as issues to be solved through training. Additionally, training is the appropriate solution for solving the performance gaps and requires a systematic approach to gather credible data.

2. PURPOSE

2.1. In conducting a TNA, curriculum specialists and trainers seek to link job performance deficiency with a training necessity so that the deficiency or gaps identified can be significantly reduced or eliminated.

3. SCOPE

3.1. The NPCJ TNA seeks to reduce and in some cases eliminate gaps that may exist in the job performance of JCF employees. The TNA is an important feature for providing trainers and course developers with empirical evidence for creating the types of training needed for a specific group, period with the required materials and resources that will allow for maximum success in outcomes. The TNA is a precursor for the Training Impact Evaluations and are to be conducted in tandem with each other.

3.2. A training needs analysis (TNA) that is properly planned and executed is one such approach. The process will enable the identification of the type and level of the training required and analyzing how this can best be provided, for incorporation into the design stage of the training cycle.

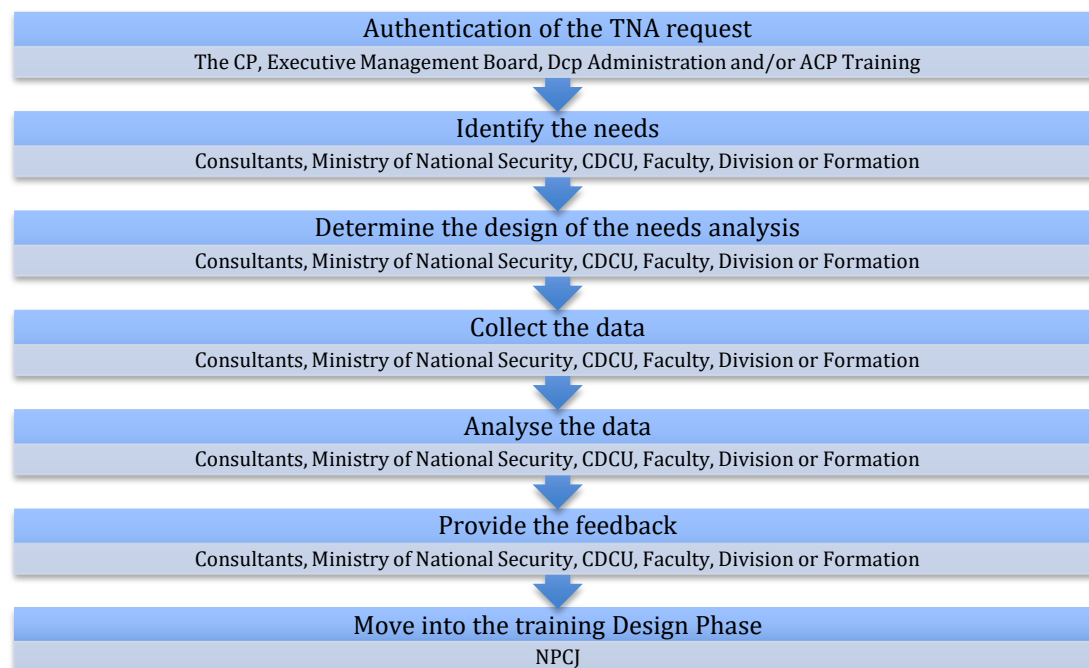

4. POLICY STATEMENTS

The TNA process is designed to:

- Solve current policing/law enforcement issues
- Avoid a past or current training or job performance issue
- Create or maximize on existing or future issues
- Provide and capitalize on learning, development or growth of the JCF.
- Ensure that the Force's learning needs are identified and addressed within the context of the strategic direction of the Jamaica Constabulary Force;
- Operate at three established levels of training analysis, with a focus on the task or occupational assessment in keeping with the Training Policy' focus on performance;
- Ensure that a consistent approach is taken to identifying the training needs of the organization. It will involve identifying the levels of training required and analyzing how the training can best be provided and;
- Be flexible enough to be used for the annual review of training needs for the Force as well as to address training requests that might arise due to changes in, for example: laws, introduction of new technology, new jobs or units, changes in Force policies and procedures.

5. ROLES AND RESPONSIBILITIES IN THE TNA PROCESS

ILLUSTRATION: Roles in the Training Needs Analysis Process

5.1.The TNA process is in part instigated by The CP, Executive Management Board, DCP Administration and/or ACP Training who will request the type of training needs. They are also at liberty to determine who will act upon the request whether internally - the Curriculum Development and Coordination Unit, (CDCU) in collaboration with the heads of faculty and departments and heads of formations and divisions or designates. However, external consultants may from time to time hold responsibility for executing the Training Needs Assessment function within the JCF, training personnel to conduct such an analysis and thereafter providing the organization with data for decision making on:

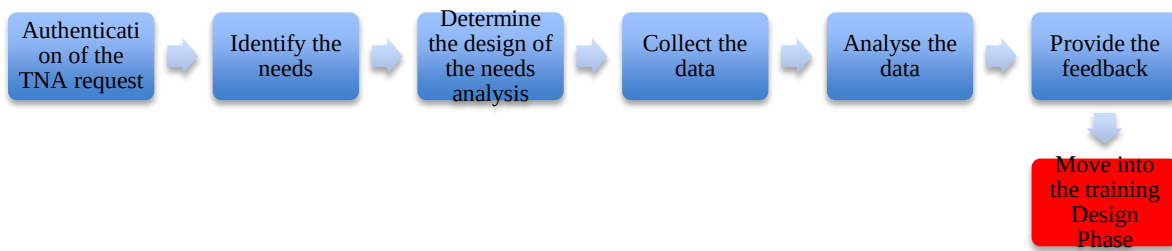

- What training is required referencing the skills and competencies needed for the relevant job and;
- Who and how many require the training and the best delivery approach and evaluation context.

5.2.The CDCU will work with the various stakeholders to identify the business case for the training. It will then modify/design the TNA data instruments, execute the data gathering and then analyze the data. The process will culminate in the management report detailing the findings and recommending approaches. Some related outcomes of the process are expected to be an understanding of:

- Competencies and skills that are needed to perform the job;
- Jobs and related tasks that need to be learned;
- Individuals who are to be trained;
- Recommended training approaches;
- General learning outcomes
- Current and desired job performance and;
- Existing and desired competencies and skills.

6. The TNA PROCEDURES

This training needs analysis process will therefore constitute the first step in the NCPJ training cycle of needs assessment, instructional objectives design and implementation of the programme and evaluation of the programme during and after the completion of the training.

6.1. The NPCJ Training Needs Process

The Force's training needs analysis process will take into consideration the three levels generally accepted in training and development as central to the identification of gaps in performance and the performance requirements. The three levels of the process are organizational, task or occupational assessment and an individual assessment. These are outlined below:

- 6.1.1. **Organizational Assessment** will be used to assess the level of organizational performance. An assessment of this type will determine what skills, knowledge, and abilities the JCF will need. This assessment will be utilized to determine what is required to alleviate the problems and weaknesses identified in the Force as well as to enhance strengths and competencies. This level of assessment will also capture various other factors, including stakeholder perspectives changing social and economic policy, political trends, technology, and the economy.
- 6.1.2. **Task or Occupational Assessment** will be used to examine the skills, knowledge, and abilities required for occupational groups, a job task analysis will be a central tool. Task assessment identifies how and which occupational discrepancies or gaps exist, example those potentially introduced by the new direction of the Force. It will also examine new ways to do work that can eliminate the discrepancies or gaps.
- 6.1.3. **Individual Assessment** will be coupled with task assessment and will be used to analyze how well an individual member or members are doing a job and will enable the determination of the capacity to do new or different work. Individual assessment provides information on which employees need training and what kind.

7. TNA METHODS

The method of training needs analysis is selected based on the job type of the employee and the analysis that has to be carried out to understand the skill gaps. Here are a few popular training need analysis methods used in the corporate world:

7.1. Surveys

Surveys are effective and simple way to identify the performance deficiencies in particular department. A well designed questionnaire is circulated among employees to understand the training needs of the employees. The questionnaire can consist of combination of open-ended and closed ended question along with some ranking and projective questions. To improve the credibility of the survey the employees are allowed to submit the answers anonymously.

7.2. Observation

In many divisions, formations and units, the Divisional Commanders, Station Managers, and Supervisors observe the working style of their staff. From this observation, the NPCJ will get information about the performance gaps individually – directly liaising with individual Divisional Commanders, Station Managers, and Supervisors or collectively at the Executive Management Board of the JCF. The observation includes watching over the functional aspects of the job and behavioral aspects of the employee and maintaining Performance Management Appraisal System (PMAS).

7.3. Interviews

It is a face-to-face conversation about the way employee performs the job. It is an effective way to collect information about output gaps by talking with each employee or a team. It can be a formal or informal setting of the interview. The interview can be conducted in person or through virtual means. Often times, these interviews accompany the observations of the Divisional Commanders, Station Managers, and/or Supervisors and are normally discussed in the meetings of the EMB.

7.4. Focus Groups

The employees working in the JCF are encouraged to talk and discuss about the ways to improve their work performance. This conversation is closely observed and analyzed to understand the training requirement in the organization. Data from this groups should include individuals from the rank and file or civilians who are the line or front staff of the division.

7.5. Customer Feedback

In most of the service industry the performance deficiencies are identified using customer feedback. The direct feedback from the customer indicates the specific work area which needs improvement. These types of feedback can be retrieved from the Inspectorate and Professional Standards Oversight

Bureau (IPROB) and the Police Civilian Oversight Authority (PCOA) who conducts and coordinates yearly reports of inspections of the stations.

8. LEGISLATIVE AUTHORITY/GUIDING PRINCIPLES

This Policy shall be read in conjunction with the Jamaica's Copyright Act 1993; Jamaica Copyright Amendment Act 2015; the JCF Training Policy, JCF Risk Management Policy and SOP, NPCJ Quality Assessment Policy, NPCJ Policy and Procedures on Academic Integrity, Student Handbook, NPCJ Student Code of Conduct.

9. EDUCATIONAL INITIATIVES

The NPCJ will provide educational initiatives to promote quality and to ensure targeted training programmes and initiatives. These initiatives may include workshops, seminars, online resources, and tutorials.

10. REVIEW AND REVISION

The NPCJ is committed to maintaining the highest standards of assessment. This Training Needs Analysis Policy and Standard Operating Procedures will be reviewed biannually to ensure its effectiveness and relevance. Any necessary revisions will be made in consultation with relevant stakeholders, including students, faculty, staff, academic/advisory boards, and certification and accreditation bodies.
