QUALITY MANAGEMENT POLICY

1. BACKGROUND

This Quality Management Policy aims to provide best practice procedures for implementing the Police Emergency Communication Centre's quality assurance program. The quality assurance program enables staff to deliver high quality service to both internal and external customers by standardizing staff performance.

The results of the quality management procedures will be used to assess customer satisfaction, improve training programs, and enhance knowledge base content. Within an ever changing society customers' expectations vary with a higher demand for quality service hence it is imperative that customer service delivery is consistently evaluated.

2. PURPOSE

This document highlights the Police Emergency Communication Centre's policy on Quality Management and our commitment to ensuring and maintaining high standards. The Centre is aware of the critical role it plays in the efficient and effective delivery of policing services as well as the enhancement of the image of the JCF.

3. SCOPE

This policy applies to all sworn and unsworn members employed to the Centre in the execution of their duties.

4. QUALITY STATEMENT

The Police Emergency Communication is fully committed to its role in providing emergency response/non-emergency response to requests from customers.

In doing so, we commit to strict compliance with and enforcement of laws and the rule of law.

The Police Emergency Communication Centre will train, develop and support our staff to deliver efficient and effective service with the aim of satisfying stakeholders' expectations.

We recognize that in order to actualize our vision of being a high-quality service department, we must be committed to improving standards of service delivery, and customer experience through the effective use of technology, process approach to management and evidence-based decision-making.

THE QUALITY ASSURANCE TEAM

The Quality Assurance Team as well as agent supervisors will be responsible for reviewing calls, addressing skill deficiencies, and recognizing superior agent performance. Specific responsibilities include:

- Scoring the appropriate number of calls per agent per month in order to identify skill gaps and provide feedback on service levels
- Providing direct coaching to agents based on the team's findings
- Upon monitoring the calls, The Quality Assurance Team should conduct a monthly meeting to identify trends in skill deficiencies across the entire group of agents.

Based on this conversation, additional training will be designed and implemented in order to drive continuous improvement. The Quality Assurance Team will conduct quarterly calibration sessions in order to align scorecard grading practices. All call monitors should score the same list of recorded calls. Results with a wide range of scores should be discussed as a group until a consistent grading standard can be decided upon.

CALL MONITORING SELECTION PROCEDURE

Calls are randomly selected among the different days of the week and times of the day in order for the quality assurance agent to provide a well-rounded perspective on an individual agent's typical performance. The quality assurance agent also selects some calls based on their noteworthy characteristics (e.g. longer than average talk time, unusually long hold times, etc.) given the calls' inherent coaching opportunities.

CALL QUALITY MONITORING FORM

The Call Quality Monitoring Form is composed of 20 questions and is scored on a 0 to 100 scale. The questions are close ended focusing on basic customer service skills and specific job skills. Each numbered question is worth 5 points. A minimum acceptable monthly score average is 85 for each call agent. Average scores below 85 will trigger additional call monitoring and a detailed remediation plan for the call agent. Past months' data will be reviewed and compared against the current month to identify trends and to ensure that call agents improve in their quality. The Quality Monitoring Form also contains a narrative section that the call scorer should use to record an overall impression of how the call went, suggestions for improvement, and to record any "critical errors" found during the call. Critical errors include the agent hanging up on the caller abruptly without resolving the customer's inquiry, using inappropriate or abusive language, or inappropriately disclosing confidential information to or about a caller.

AGENT FEEDBACK SESSIONS

Upon completion of the call monitoring process, the Quality Assurance Agent should set up individual one-on-one feedback sessions with the respective call takers. These meetings should be scheduled in a timely manner following the call monitoring process and no later than by the end of the week. These meetings are an opportunity to review call monitoring results and areas for agent improvement, and serve as a two-way dialogue to improve agent development and call monitoring processes.

PERFORMANCE RECOGNITION

Performance recognition should occur on a monthly basis after call monitoring has occurred. A list of agents with perfect QA scores for the month should be recognized through an office bulletin board or e-mail newsletter. Showcasing and honoring top talent further incentivizes agents to improve their performance, and reinforces the culture of prioritizing high quality customer service.

AGENT FEEDBACK CONSIDERATIONS

Consideration will be given to tailoring agent feedback based on the individual agent's stage of development. The focus will be on helping new agents to perform satisfactory work, to help agents performing in a satisfactory way to have excellent performance, and to recognize and encourage agents having excellent performance to continue doing so.
