INTRODUCTION

The Jamaica Constabulary Force (JCF) is administratively divided into five (5) Areas and nineteen (19) Geographic Divisions, with over 50 billion dollars' worth of real estate property. With the actuality of existing and newly constructed police stations and other JCF property, maintenance plays the optimal role in keeping these properties up to par and in great shape.

Inspections and maintenance goes hand in hand, as routine inspections are vital for identifying maintenance issues that can become a big problem if not identified and remedy early. Routine inspection lengthens the property lifespan, increase efficiency, decreased unplanned downtime, and promote a healthy and safe work place. Routine inspections brings about routine maintenance which ensures facilities are being well kept. With a commitment to conducting ongoing assessment of conditions and developing and implementing preventive and corrective measures, there will be numerous benefits.

Purpose

The purpose of the Property Management and Maintenance Division Inspection manual is to establish a document to develop and provide information, guidelines, and standard operating procedures to personnel for the effective inspection of the various JCF facilities.

Policy Statement

It is the policy of the JCF that all refurbishing and maintenance of its infrastructure is carried out in a timely manner to prevent deterioration and to construct more modern Facilities to make them fit-for-purpose in order to enhance service delivery.

Scope

The scope covers the lifecycle and management of all JCF infrastructure assets owned and leased. Additionally, it covers the inspection, and maintenance of these facilities.

Definitions

- I. Inspection**
Inspections shall be conducted within the categories of routine inspection, periodic inspection, unscheduled inspection and detailed surveys.
- II. Routine Inspection**
Shall be conducted daily by the station or division conservation officer to identify defects on the building or the facility. If any defect is identified a report shall be submitted to the Station Manager who shall submit a report of the findings to the Commanding Officer for the Division who shall submit a request to the PMMD.
- III. Periodic Inspection**
Shall be conducted on a monthly, quarterly and bi-annually basis by the PMMD inspection teams to provide base information for the planning of maintenance and repair works. In so doing any damages including deterioration and defects can be diagnose and a determination made as to a suitable repair method for light damages. A report shall be submitted to PMMD headquarters making request for funding.
- IV. Unscheduled Inspection**

Shall be conducted in an emergency by the Area Office /Unit in the event of unexpected events and natural disasters such as floods, hurricane, fires and earthquakes. A report shall thereafter be submitted through the area office to PMMD Headquarters seeking immediate funding through the GOJ procurement procedures.

BENEFITS OF PERIODIC/ROUTINE INSPECTION

Periodic/ Routine inspections helps to:

- Identify and record existing and potential hazards that may lead to incidents, injuries, and illnesses
- Reveal problems early when there are relatively easy and inexpensive to fix.
- Determine root causes of hazards
- Recommend corrective action, monitor steps taken to eliminate hazards or control the risk.
- Control costs on processes of repairs, refurbishing and renovation of equipment, devices, and building
- Provide evidence of due diligence for liability protection and determine necessary frequency of maintenance
- A checklist sets to outline inspection responsibilities, control and record inspection activities and provide feedback of inspection conducted.

Keeping inspection records is pertinent. Previous inspection records show what has previously been identified, what was concentrated on and the areas that were not inspected. Records assist with identifying issues, and then establish whether recommendations were implemented.

To ensure that all JCF facilities are kept in a pristine condition, regular maintenance must be conducted. This will be guided by an inspection plan as well as a maintenance plan which shall outline the frequency of the inspection and maintenance.

The purpose of station/facilities inspection is to keep the workplace up to par and in great shape.

1. The inspection checklist forms will be carried at all locations and filled out by PMMD workmen.

Inspection checklist and Inspection & maintenance schedule matrix

2. On completion of the inspection exercise, the forms will be handed in to the Project Management, Logistics and Inspection Department, which will coordinate the maintenance activities needed for the specific stations.
3. Maintenance schedule will then be given to the team who will be carrying out the maintenance activities along with maintenance work log sheet.
4. On completion of maintenance activities, both forms, the maintenance schedule and work log sheet, will be handed in to the Project Management, Logistics and Inspection Department

Work Log sheet and Maintenance Schedule.

The inspection checklist states:

- Where will inspection be done (facility, parish and division)
- When to inspect each area
- Who carries out the inspection
- What degree of detail to inspect each area
- Facility overall percentage
- Date of last inspection
- Date of next inspection

How often inspections are performed will depend on:

- The date of last inspection

- The facility overall percentage
- Unexpected events are natural disasters

STANDARD OPERATING PROCEDURES FOR INSPECTION

Purpose

To ensure the structural integrity, safety, and functionality of all buildings under the jurisdiction of the Jamaica Constabulary Force (JCF) by identifying, documenting, and addressing defects promptly and efficiently.

Scope

This SOP applies to all buildings managed and maintained by the Property Management and Maintenance Division of the JCF. It covers the inspection process, defect reporting, assessment, and subsequent repair actions.

Responsibilities

- **Inspecting Officer:** Responsible for conducting building inspections, identifying and documenting defects, Issue Inspection report, and conducting emergency on-site assessments.
- **Station Commander or Representative:** Accompanies the Inspecting Officer during inspections, reviews the inspection report, acknowledges identified defects, and signs the inspection form, report defects to the PMMD Help desk.
- **Help Desk (PMMD):** Receives documented defects, generates tickets, coordinates with the assessment team, and manages the repair process.
- **Assessment Team:** Conducts detailed assessments of reported defects, generates material lists, and categorizes defects for repair.
- **Property Management Maintenance Division:** Receives maintenance tickets, schedules repairs, and ensures timely resolution of reported defects.

Requirements

- **Inspection Tools:** Notebook, camera, flashlight, measuring tape, inspection checklist.
- **Documentation Tools:** Inspection report form, Inspection Checklist.
- **Communication Tools:** Access to WhatsApp, phone call, email or help desk ticketing system.
- **Protective Gear:** Hard hat, safety boots, gloves, and any other necessary personal protective equipment (PPE).

Process

Step 1: Preparation for Inspection

1. **Scheduling:** Coordinate the inspection schedule with the Station Commander.
2. **Gathering Tools:** Ensure all necessary tools and documents are ready, including the inspection checklist, Inspection report booklet, camera, and PPE.
3. **Briefing:** Brief the inspection team on the objectives and scope of the inspection.

Step 2: Conducting the Inspection

1. **Station Commander Presence:** Ensure the Station Commander or a representative is present and accompanies the Inspecting Officer throughout the inspection.
2. **Initial Walkthrough:** Conduct an initial walkthrough of the building to get an overview.

3. **Detailed Inspection:** Use the inspection checklist to conduct a detailed inspection of all areas, including structural components, electrical systems, plumbing, and safety features.
4. **Documentation:** Document each identified defect with a detailed description, location, severity, and photographic evidence if possible.

Step 3: Identifying and Documenting Defects

1. **Log Defect:** Record each defect in the Inspection report, including:
 - Defect ID
 - Description of the defect
 - Location
 - Defect Category
 - Severity (High/Medium/Low)
 - Photo reference (if applicable)
2. **Inspection Report:** Compile the defects into a comprehensive Inspection report.
3. **Signatures:** Ensure the inspection report is signed by both the Station manager or his representative and the Inspecting Officer physically or electronic signature. Complete the report in triplicate:
 - First copy: Issued to the Station Commander or his representative.
 - Second copy: Attached to the inspection checklist.
 - Third copy: Remains in the inspection booklet.

Step 4: Reporting Defects to Help Desk

1. **Reporting:** Reporting identified defects directly to the Help Desk should be done by the Station commander or his representative after receiving the Inspection report.
2. **Help Desk Action:** The Help Desk will:
 - Generate a ticket for the identified defect.
 - Coordinate with the assessment team.

Step 5: Defect Assessment and Categorization

1. **Emergency On-Site Assessment** In the event of an emergency where the defect presents an immediate hazard or danger to the station or officers, this should be reported to the area supervisor forthwith who will cause the Help desk to generate a ticket for same, after which he will then authorize an emergency on-site assessment subsequent to or after the issuance of a ticket, provided that the inspecting officer possesses the necessary competence. A material list pertaining to the assessment should be generated and submitted to the help desk upon completion of the assessment
2. **Assessment Team** the assessment team will:
 - Conduct a detailed evaluation.
 - Generate a material list required for repairs.
 - Categorize defects by type (e.g., plumbing, electrical, masonry) and by severity (minor or major repairs).
 - Minor Repairs: Cost less than one million JMD.
 - Major Repairs: Cost one million JMD and over.

Step 6: Repair Scheduling

1. **Work log Sheet:** Generate individual Work log sheet according to the defect category.
2. **Repair Scheduling:** Schedule repairs based on the severity:
 - Minor Repairs: To be fixed within 30 days.
 - Major Repairs: To be fixed within 90 days.

Step 7: Follow-Up and Close-Out

1. **Help Desk Follow-up:** A reminder email should be sent by the help desk to the station manager one week after defects are identified and an inspection report is issued, if the defect has not been reported.
2. **Inspection Follow-Up:** Conduct a follow-up inspection to verify the completion of repairs.

3. **Close-Out Ticket:** The Help Desk should close-out the ticket, during which the should summarizing the repairs completed and any remaining issues, when the repairs was done and by whom carried out the repairs.
4. **Final Sign-Off:** Obtain final sign-off from the Station Commander on the job sheet then update records accordingly.

BASIC PRINCIPLES FOR INSPECTION

When conducting inspections, these basic principles should be followed:

- Attention must be drawn to the presence of any immediate danger
- Shut down and "lock out" any hazardous items that cannot be brought to a safe operating standard until repaired or rectified.
- Clearly describe each hazard and its exact location. Allow "on-the-spot" recording of all findings using all necessary devices whether government issued or personal.
- Do not unnecessarily disrupt work activities.
- Use the necessary devices and equipment to record information.
- Take a photograph if you are unable to clearly describe or sketch a particular situation.

Inspection Team

Inspections will be performed by:

- Four (4) inspection teams
- Each team comprising of three (3) Inspection Officers

However, it is recommended that when inspection is being conducted at a station or facility the Divisional Commander, Station Manager, Supervisor, officer on duty or groundsman, should be a part of the inspection process. This aids to improve the odds of finding hazards within the station building and property.

Personnel who will be performing the inspections, should have a well-rounded background in the different relevant area of inspection, or they should be trained or educated related to the areas, or processes to be inspected.

It is imperative that each inspection officers are knowledgeable on how to use each equipment and tools issued to them.

How often inspections are performed will depend on:

- The date of last inspection
- The facility overall percentage
- Unexpected events are natural disasters

In sections should be guided by the PMMD Facilities/Stations Maintenance Schedule Matrix, see attached.

Inspection Frequency	Inspection Facilities
Monthly	Facilities that are graded 0-40%
Quarterly	Facilities that are graded 41-70%
Bi-Annual	Facilities that are graded 71-100%

Inspection of facilities will be conducted as per the following table

Inspection methods

- i. Visual inspection
- ii. Electrical tests
- iii. Check by tapping with a test hammer
- iv. Check by touching

- v. Check for leaking,
- vi. Interlocking function test

Inspection officer will continually conduct ongoing inspections as part of their job responsibilities. The frequency of these inspections varies with several properties to be maintained and condition of these properties. Daily checks should be done by Station Managers, compliances officer or the local groundsman to assure that the property is kept in good condition. The Maintenance Inspection checklists should be completed on visit of each inspection.

Reviewing of information will be carried out after each inspections to identify where corrective actions will be needed. Use older reports to identify trends. Analysis of inspection reports may show the following:

- priorities for other corrective action
- need for improving safe work practices
- insight about why incidents are occurring in specific areas
- need for education and training staff in certain areas

Forms

- SEE PROPERTY MANAGEMENT AND MAINTENANCE DIVISION MAINTENANCE PROGRAMME FOR ALL FORMS DEALING WITH INSPECTION.
