1.0 Introduction

It is imperative to note that buildings are not eternal - what goes up will eventually come down without proper upkeep. Every building needs regular maintenance to ensure that structural defects are readily identified and addressed and all the amenities in the building are functional. In the Jamaica Constabulary Force, many of the facilities are dilapidated, limited in size, scope and not designed for policing purpose. Replacement, repairing and upgrading of these facilities are needed to make them fit and suitable for purpose. In order to improve the image of the organization, it is imperative that the facilities be modernized to improve the aesthetics and durability of the buildings. In light of this a more standardize system will enable the JCF to ensure greater management and accountability of all properties. The Property Management and Maintenance Division will have direct responsibility for all construction, refurbishing, and maintenance of infrastructures. Moreover, there will be greater management and accountability of all resources (human, equipment and tools).

Facilities maintenance encompasses a broad spectrum of services, competencies, processes and tools which are required to ensure that the built environment will perform the function for which the facility was designed including the day-to-day activities undertaken in the building. Buildings inherently function less effectively over time due to natural causes such as climate, daily occupants use, mechanical obsolescence, and more. When left unresolved these issues can devalue user experiences, create dangerous and unhealthy environments, and incur higher maintenance costs. It is therefore prudent to develop a reliable planned maintenance programme and a scheduled preventive and corrective maintenance plan so that the various stations and other JCF facilities will be effectively maintained.

The Property Management and Maintenance Division is developing this maintenance programme as a continuous work task with a commitment to conducting ongoing assessment of conditions and developing and implementing preventive and corrective measures. With the implementation of the maintenance programme, there will be numerous benefits, including the reduction of overall maintenance and building costs, the provision of more stable buildings, increase in the years of reliable service, and the ability to develop more meaningful and adequate budgets to address property management and maintenance issues.

2.0 Purpose

The purpose of the Property Management and Maintenance Division Maintenance Programme is to establish a document to develop and provide information, guidelines, and standard operating procedures to personnel for the effective construction (where applicable) and maintenance of the various JCF facilities. It also outlines the roles and responsibilities of maintenance personnel and the regular activities essential to support and maintain the infrastructure (owned and leased).

3.0 Scope

The scope covers the lifecycle and management of all JCF infrastructure assets owned and leased. Additionally, it covers the construction, renovation, reconfiguration, and maintenance of these facilities.

4.0 Policy Statement

It is the policy of the JCF that all refurbishing and maintenance of its infrastructure is carried out in a timely manner to prevent deterioration and to construct more modern facilities to make them fit-for-purpose in order to enhance service delivery.

5.0 Definitions

5.1 Maintenance plan summary

This plan defines work to be done to proactively maintain assets within a facility. The contents of the plan help to facilitate the continued use of an asset at optimum performance and avoid significant deterioration of the facility infrastructure.

5.2 Corrective Maintenance

Maintenance is carried out following detection of an anomaly and aimed at restoring normal operating conditions. This approach is based on the belief that the costs sustained for downtime and repair in case of fault are lower than the investment required for a maintenance program. This strategy may be cost-effective until catastrophic faults occur.

5.3 Preventive Maintenance

Maintenance carried out at predetermined intervals or according to prescribed criteria, aimed at reducing the failure risk or performance degradation of the infrastructure. The maintenance cycles are planned according to the need to prevent deterioration of the infrastructure.

5.4 Risk Based Maintenance

Risk Base maintenance is carried out by integrating periodic inspections and assessment to prioritize maintenance resources toward infrastructures and other resources that carry the most risks if they were to fail.

5.5 Routine Inspection

Routine inspections are frequently scheduled inspections to quickly find out any unusual incidents and defects on the building facilities. These generally consist of visual inspections while walking in and around the building.

5.5 Periodic Inspection

Periodic inspections are usually carried out at fixed intervals and provide base information to the planning of maintenance and repair works. These inspections are conducted to survey damages, to diagnose deterioration and defects and to determine the selection of suitable repair methods for damages and deteriorations.

5.6 Unscheduled Inspection

Unscheduled inspections are most often conducted to survey and evaluate the effects of unexpected incidents such as floods, strong wind, fires, earthquakes, and other natural disasters.

5.7 Detailed survey

Survey and design are generally conducted by qualified personnel and is applied to the following cases:

- i.* To further identify causes of structural defects and damages
- ii.* To find out the most suitable repair works for the damages
- iii.* To evaluate the performance of repair works
- iv.* To survey unidentified incidents arising after repair works and a final inspection
- v.* To ensure structural safety when facilities are to be used with loading conditions more than the design conditions
- vi.* To evaluate structural safety when facilities are to be used more than design periods.

5.8 Request for Service

For the purpose of this programme, request for service shall be: plumbing, electrical, carpentry, sewage, roofing, structural integrity, fumigation, water, and sanitizations.

6.0 Standard Operating Procedures

MANAGEMENT AND MAINTENANCE FOR ALL FACILITIES

The management and maintenance of all JCF facilities shall be in conformance with the following Standard Operating Procedures.

Requests for Service

- i. Where a station/formation is desirous of the services from the Property Management and Maintenance Division (PMMD), an application shall be made through the Support Services Branch (SSB) to Property Management and Maintenance Division (PMMD) and the Property Management and Maintenance helpdesk system Pmmdhelpdesk@jcf.gov.jm detailing the nature of service required.
- ii. The station/formation will receive an email within 24 hours from PMMD helpdesk stating that the request has been received and a ticket created to treat with the request.
- iii. The helpdesk operators will task internal units, such as Area teams and the Technical unit based on the nature of the request to treat with same.
- iv. The station/formation from which the request was sent will receive follow-up emails from PMMD helpdesk providing updates on the request made until it is actioned and closed.

New Construction

Where there is a request for a new construction of a facility that has been approved by DCP FDLP:

- i. Proof of ownership shall be determined.
- ii. Survey diagram (ID report, topographic report, etc.) shall be obtained to identify the boundaries of the site.
- iii. A concept building plan shall be drafted by the technical department of PMMD which is then examined and once accepted by the client it shall be signed off by the area or formation officer and Chief Technical Officer.
- iv. The Construction drawings will be submitted to relevant external agencies (Parish Council, NEPA, Fire Department and Ministry of Health, etc.) for final approval.
- v. Bill of quantities will be obtained.
- vi. Once approved, the Government of Jamaica Procurement Guidelines shall be engaged.

Renovation/Refurbishing

Where there is a request for renovation or refurbishing of a facility the following shall apply:

- i. A measured survey shall be conducted of the existing building in its present state.

- ii. A proposed redesign plan shall then be done which shall be approved by the CTO.
- iii. Bill of quantities obtained.
- iv. Once approved, the Government of Jamaica Procurement Guidelines shall
- v. be engaged.

Maintenance

To ensure that all JCF facilities are kept in a pristine condition, regular maintenance must be conducted and the following shall apply:

- I. An inspection of stations/facilities shall be conducted and facility inspection checklist completed and grading calculated.
- II. The Overall Percentage Grade for the facility will be the determinant of the frequency of inspection categorized as follow See figure:1 below
- III. The grading of the facility/station will then be inputted in the facility/station matrix, see Appendix:3 which will schedule the date for maintenance and next inspection.
- IV. All maintenance activity carried out at each station/facility will be log on PMMD'S work log sheet and at the station/facility that work was carried out log book.

Frequencies of inspection

Inspection Frequency	Inspection Facilities
Monthly	Facilities that are graded 0-40%
Quarterly	Facilities that are graded 41-60%
Bi-Annual	Facilities that are graded 71-100%

Figure: 1

Inspection of facilities will be conducted as per the following table
See Appendix 4 for grading system.

Inspection methods

- i. Visual inspection
- ii. Electrical tests
- iii. Check by tapping with a test hammer
- iv. Check by touching
- v. Check for leaking,
- vi. Interlocking function test

7.0 STANDARD OPERATING PROCEDURES FOR INSPECTION

A. Purpose

To ensure the structural integrity, safety, and functionality of all buildings under the jurisdiction of the Jamaica Constabulary Force (JCF) by identifying, documenting, and addressing defects promptly and efficiently.

B. Scope

This SOP applies to all buildings managed and maintained by the Property Management and Maintenance Division of the JCF. It covers the inspection process, defect reporting, assessment, and subsequent repair actions.

C. Responsibilities

- **Inspecting Officer:** Responsible for conducting building inspections, identifying and documenting defects, Issue Inspection report, and conducting emergency on-site assessments.
- **Station Commander or Representative:** Accompanies the Inspecting Officer during inspections, reviews the inspection report, acknowledges identified defects, and signs the inspection form, report defects to the PMMD Help desk.
- **Help Desk (PMMD):** Receives documented defects, generates tickets, coordinates with the assessment team, and manages the repair process.
- **Assessment Team:** Conducts detailed assessments of reported defects, generates material lists, and categorizes defects for repair.
- **Property Management Maintenance Division:** Receives maintenance tickets, schedules repairs, and ensures timely resolution of reported defects.

Requirements

- **Inspection Tools:** Notebook, camera, flashlight, measuring tape, inspection checklist.
- **Documentation Tools:** Inspection report form, Inspection Checklist.
- **Communication Tools:** Access to WhatsApp, phone call, email or help desk ticketing system.
- **Protective Gear:** Hard hat, safety boots, gloves, and any other necessary personal protective equipment (PPE).

Process

Step 1: Preparation for Inspection

1. **Scheduling:** Coordinate the inspection schedule with the Station Commander.
2. **Gathering Tools:** Ensure all necessary tools and documents are ready, including the inspection checklist, Inspection report booklet, camera, and PPE.

3. **Briefing:** Brief the inspection team on the objectives and scope of the inspection.

Step 2: Conducting the Inspection

1. **Station Commander Presence:** Ensure the Station Commander or a representative is present and accompanies the Inspecting Officer throughout the inspection.
2. **Initial Walkthrough:** Conduct an initial walkthrough of the building to get an overview.
3. **Detailed Inspection:** Use the inspection checklist to conduct a detailed inspection of all areas, including structural components, electrical systems, plumbing, and safety features.
4. **Documentation:** Document each identified defect with a detailed description, location, severity, and photographic evidence if possible.

Step 3: Identifying and Documenting Defects

1. **Log Defect:** Record each defect in the Inspection report, including:
 - Defect ID
 - Description of the defect
 - Location
 - Defect Category
 - Severity (High/Medium/Low)
 - Photo reference (if applicable)
2. **Inspection Report:** Compile the defects into a comprehensive Inspection report.
3. **Signatures:** Ensure the inspection report is signed by both the Station manager or his representative and the Inspecting Officer physically or electronic signature. Complete the report in triplicate:
 - First copy: Issued to the Station Commander or his representative.
 - Second copy: Attached to the inspection checklist.
 - Third copy: Remains in the inspection booklet.

Step 4: Reporting Defects to Help Desk

1. **Reporting:** Reporting identified defects directly to the Help Desk should be done by the Station commander or his representative after receiving the Inspection report.
2. **Help Desk Action:** The Help Desk will:
 - Generate a ticket for the identified defect.
 - Coordinate with the assessment team.

Step 5: Defect Assessment and Categorization

1. **Emergency On-Site Assessment** In the event of an emergency where the defect presents an immediate hazard or danger to the station or officers, this should be reported to the area supervisor forthwith who will cause the Help desk to generate a ticket for same, after which he will then authorize an emergency on-site assessment subsequent to or after the issuance of a ticket, provided that the inspecting officer possesses the necessary competence. A material list pertaining to the assessment should be generated and submitted to the help desk upon completion of the assessment

2. **Assessment Team** the assessment team will:
 - Conduct a detailed evaluation.
 - Generate a material list required for repairs.
 - Categorize defects by type (e.g., plumbing, electrical, masonry) and by severity (minor or major repairs).
 - Minor Repairs: Cost less than one million JMD.
 - Major Repairs: Cost one million JMD and over.

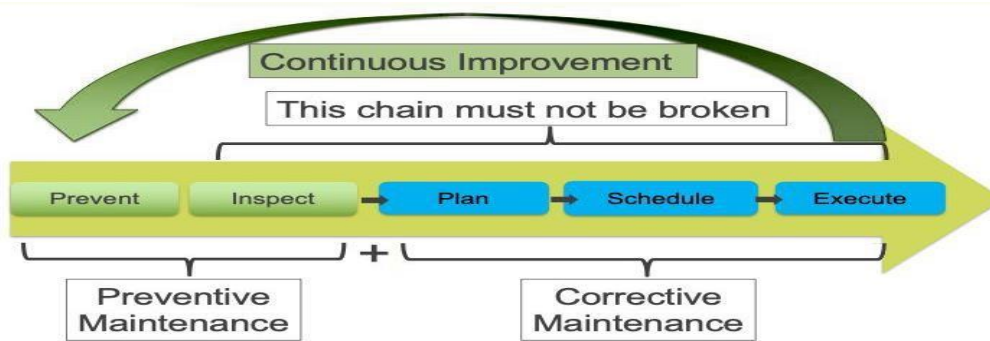

Step 6: Repair Scheduling

1. **Work log Sheet:** Generate individual Work log sheet according to the defect category.
2. **Repair Scheduling:** Schedule repairs based on the severity:
 - Minor Repairs: To be fixed within 30 days.
 - Major Repairs: To be fixed within 90 days.

Step 7: Follow-Up and Close-Out

1. **Help Desk Follow-up:** A reminder email should be sent by the help desk to the station manager one week after defects are identified and an inspection report is issued, if the defect has not been reported.
2. **Inspection Follow-Up:** Conduct a follow-up inspection to verify the completion of repairs.
3. **Close-Out Ticket:** The Help Desk should close-out the ticket, during which the should summarizing the repairs completed and any remaining issues, when the repairs was done and by whom carried out the repairs.
4. **Final Sign-Off:** Obtain final sign-off from the Station Commander on the job sheet then update records accordingly.

8.0 STANDARD OPERATING PROCEDURE FOR DIFFERENT TYPES OF MAINTENANCE TO BE CARRIED OUT AT STATIONS/FACILITIES.

Corrective Maintenance

- I. Once a defect has been observed by the Conservation Officer or a member of a station/Division/facility, an email should be sent from the Station/Division/facility to PMMD Helpdesk pmmdhelpdesk@jcf.gov.jm and copied to ACP Services.
- II. The PMMD Area supervisor in charge of that area will then visit the location and conduct an assessment and cause the issue to be rectified. PMMD area supervisors will complete the relevant forms and submit same to the PMMD Helpdesk.
- III. For emergency repairs, SSP in charge of PMMD will expedite the process to have the matter addressed within 48 hours.

Preventive Maintenance Procedures:

- I.** PMMD Area Officer shall conduct maintenance of all facilities within his area according to the maintenance schedule.
- II.** Prepare a report outlining all facilities within his area and repairs required.
- III.** A schedule will be developed to conduct repairs of facilities within the Area.

Maintenance Plan Summary

The maintenance plan aims to:

- Improve resource management
- Provide a safe environment
- Create a physical environment that is conducive for work
- Ensure repairs and maintenance are executed correctly, accurately, safely and quickly.
- Schedule the different maintenance activity and maintain logs of work orders and repairs, as well as other relevant records.
- Identify who is responsible for performing each maintenance responsibility.
- Confirm sub-contracted services availability and cost.
- Identify best-practice engineering standards applicable to each job.
- Plan the Work
- Reviews the backlog (all uncompleted work) and identify priority work and equipment

PMMD'S GENERAL MAINTENANCE ACTIVITY GUIDELINES/ CHECKLIST

Painting

- Major repainting will be carried out every two (2) years to three (3) years.
- Minor repainting will be done as needed.

Plumbing

Members of The Property Management of Maintenance Division will:

- Check for leaks and defects on each inspection.
- Inspect drains for blockages to include sewage.
- Check both hot and cold taps are functioning
- Inspect ejection pumps are working (replace as needed)

Plumbing is a major building component and will be included in the preventive maintenance program. Sprinkler systems, water fountains, pumps, and drains are likely targets for preventive maintenance. Stagnant water must be avoided at all costs since it damages building materials and can lead to mold and biohazard concerns.

Roof Repairs

- Roofs will be included in a preventive maintenance program and inspected on a regular schedule. The aim is to maintain good roofs in a timely manner. Thus, all leaks and damaged tiles must be repaired as soon as possible to prevent water damage and mold growth.
- Timber roofs- Check for damaged rafters, and coverings etc.
- Slab roof- Check for cracked, leaking and damaged membrane.

Electrical

All electrical systems have the potential to cause harm, and electrical hazards hence delicate care have to be taken.

- Check and replace damaged and blown bulbs, tubes and other lighting fixtures, defective switches and circuit Breakers.
- Troubleshooting
- Conduct continuity testing to rectify and remedy short circuitry.
- Rectify overloaded circuit.

Preventative Electrical Maintenance

Electricians will carry out regular inspection and service of equipment to detect potential problems and to take proper corrective measures through the approved work process controls.

Proactive Electrical Maintenance

The property Management and Maintenance Division earmark is for the latest testing equipment to compile a full diagnostic evaluation that predicts when and where maintenance needs to be conducted before a system failure occurs.

Maintenance Workflow:

- All maintenance activities will be listed in maintenance Schedule. The maintenance team and technicians will refer to the schedule for the planned daily activities. All details about materials needed for each work order, as well as spare parts needed, should be outlined in the work request description.
- Technicians shall pick up the necessary materials from the PMMD stores, or other locations specified before going into the field.
- When treating with a work orders, employees are required to take pictures of details and attach them to the work request.

Emergency Response System-Standard Operating Procedure (SOP)

Emergencies - Emergencies are the highest priority source of work. Emergencies are those conditions which are **immediately threatening** to the life or safety of residents, staff, or structures. .

Emergency Response System for PMMD

- There exists an after-hours on call system to respond to emergency. For maintenance requests 24 hours a day, the helpdesk system will document the results of that response.
- The twenty-four (24) hour emergency response system in place includes the designation of a maintenance personnel in charge for each day as well as a list of qualified pre-approved contractors and having access to materials and suppliers.
- **Goal: initiated with 24 to 48 hours.**

List of Emergencies

The following is a list of matters that the Property Management and Maintenance Division deems an Emergency:

EMERGENCY	
1	Fire of any kind
2	Gas leak
3	Electric power failures
4	Broken water pipes
5	Sewage blockage
6	Roof drain blockage
7	Security breaches
8	Undefined Emergencies

Emergency Contact Persons	Contacts
Garfield Taylor (Superintendent in charge of PMMD)	876- 819-0986
Phillip Morris (Operations officer)	876- 833-2683
Jervis Williams (Technical Director)	876-819-6478
Chantal Myers (Project Manager)	876- 220-2825

RESPONSIBILITIES

The Property Management and Maintenance staff will be responsible for the following station facilities:

Locks, excluding work that must be carried out by a professional locksmith,

- ☐ Supply and fitting of light tubes and globes
- ☐ Replacement of castors on chairs
- ☐ Regular inspections of gutters and down pipes
- ☐ Cleaning of silt and acid traps
- ☐ Checks of security fences and minor repairs as required
- ☐ repainting of signs/blackboards
- ☐ Movement of furniture, whiteboards, blackboards and notice boards
- ☐ Minor repairs to fans
- ☐ Minor repairs to furniture and equipment
- ☐ Minor wall, ceiling and door repairs
- ☐ Cleaning of minor graffiti immediately it appears
- ☐ Re-screwing of internal door hinges
- ☐ Minor landscape maintenance
- ☐ Replacing tap washers
- ☐ Replacing signs
- ☐ Others

The following summarizes key responsibilities:

The Deputy Commissioner of Police, FDLP;

Shall be responsible for the final approval and management of all JCF projects.

Assistant Commissioner of Police, Services Branch;

Is responsible for the preliminary approval of all projects to include but not limited to payments to suppliers, contractors and acquisition of goods.

Senior Superintendent of Police in charge of PMMD

Shall be responsible for the overall management and maintenance of the JCF facilities

Senior Superintendent PMMD Core Responsibilities:

- i. Oversees administration, management, contract compliance and maintenance of all JCF developments and other properties;
- ii. Coordinates the development and implementation of policies and procedures in relation to property management and maintenance Division;
- iii. Conducts studies, reviews, and evaluations of management operations and standards, including development of new concepts for improvement of departmental performance;
- iv. Manages logistics activities including staffing levels of the department;
- v. Manages fiscal activities including creating, monitoring and controlling and reviewing budgets and financial goals for the acquisition, maintenance, construction and design of all related properties;
- vi. Oversees the evaluation of staff in relation to the strategic goals and objectives of the department/organization (annual performance review) and recommends areas for improvement;
- vii. Ensures that all employee training needs are assessed, and necessary training programs are designed and implemented to meet staff requirements;
- viii. Develops, implements and monitors preventative maintenance and capital improvement plans for all properties under JCF management;
- ix. Works closely with the Procurement Officer to ensure that services and products are purchased in accordance with Force policies, procedures and guidelines to maximize efficient use of resources;
- x. Reviews/prepares monthly/annual property summaries, attend meetings and provide timely written reports focused on asset management, risk management and accounting on budgeting when necessary;
- xi. Identifies strengths and challenges of staff members in an effort to improve efficiency and effectiveness and foster a professional culture wherein staff can accomplish goals and feel good about their contributions;

- xii. Facilitate effective communication between project managers and current/prospective partners;
- xiii. Supports the asset manager and property managers in the development of plans for leased properties; Supports and assists property managers in negotiating significant leases, major service contracts, and solving property operating issues;
- xiv. Supports the asset managers, development managers, and property managers in the assessment of potential value-added renovations and/or redevelopment;
- xv. Recommends appropriate value enhancement strategies as appropriate; and
- xvi. Works with the Project Management, Construction and Maintenance, Design, Finance and Logistics Department managers in the development and execution of property construction, repair, renovation and refurbishment programs.

Superintendent in charge Technical Department:

Shall be responsible for approving all new designs, and the management of the construction processes

Core Responsibilities:

The incumbent shall, inter alia;

- i. Organize and monitor all technical activities for various projects and ensure compliance to all objectives and prepare appropriate budgets and coordinate with various staff to ensure customer satisfaction;
- ii. Prepare and maintain project budgets and ensure compliance to all project schedule and ensure optimal customer satisfaction;
- iii. Monitor and provide expert knowledge on all tests and technologies and perform all system level engineering services to develop hardware and software for systems and ensure adherence to all product designs and project requirements;
- iv. Determine all design philosophy and ensure consistency for same on projects and participate in various events to maintain knowledge on latest technologies and investment;
- v. Monitor all equipment and tools and complete all projects within required timeframe and ensure optimal quality standards for same and monitor efficient working of multiple projects; and
- vi. Coordinate and monitor engineering practices to reduce cost and improve quality of projects.

Operations Officer PMMD

The incumbent shall display practical, analytical and technical skills in responsibility for construction and maintenance of JCF properties

Core Responsibilities:

- i. Coordinates facilities management of JCF properties island-wide to include inspection, repairs, renovations and refurbishment of machinery, equipment and building systems to ensure that they are safe for use;
- ii. Manages a record system of maintenance work performed on all facilities and equipment and schedule future maintenance work;
- iii. Prepares cost estimates, budgets and work timetables in relation to building construction, plumbing and electrical installations and general and waste management;
- iv. Overseeing and directing construction projects from conception to completion including managing plumbing, electrical and waste management components of JCF projects;
- v. Secures the maintenance of an efficient and effective PMMD and the financial resources required in a cost-effective manner (safe, secure, well-maintained facility that meets environmental, health and security standards);
- vi. Provides written reports on work progress and budget adherence (issues) to Director PMMD;
- vii. . Appropriately and effectively responds to emergencies, work delays and other project construction and maintenance problems; and
- viii. Overseeing onsite and offsite constructions to monitor compliance with legal requirements, building and safety codes, and other regulations

Project Manager

Core Responsibilities:

The incumbent shall be responsible for planning, overseeing and leading PMMD projects from ideation to completion. This includes inter alia:

- i. Maintains JCF project management standards throughout the development and execution of all projects to include during regular performing assessments, coordinating internal resources and designing a risk mitigation plan;
- ii. Monitors and tracks the status of projects with regular updates from team leaders and members and ensures resource availability and allocation;
- iii. Manages project management team including overseeing all incoming and outgoing project documentation, providing guidance and measure project team performance using appropriate tools and techniques;

- iv. Track project performance, specifically to analyse the successful completion of short and long-term goals;
- v. Manages relationships with internal and external stakeholders (third parties/vendors);
- vi. Compiles collected information from project management team members to create transparent project reports for Director PMMD;
- vii. Initiates new projects, leads on project planning sessions and develops project plans to be shared with staff;
- viii. Manages the project progress including ensuring that projects meet deadlines and stay within scope and within ascribed budget;
- ix. Meets budgetary objectives and make adjustments to project constraints based on financial analysis; and
- x. Attends conferences and training sessions to develop leadership skills as required to maintain proficiency.

PMMD Area Supervisors

Shall be responsible to conduct frequent inspections and minor repairs of JCF's facilities

Core responsibilities:

- i. Coordinates facilities management of JCF properties island-wide to include inspection, repairs, renovations and refurbishment of machinery, equipment and building systems to ensure that they are safe for use;
- ii. Manages a record system of maintenance work performed on all facilities and equipment and schedule future maintenance work;
- iii. Prepares cost estimates, budgets and work timetables in relation to building construction, plumbing and electrical installations and general and waste management;
- iv. Overseeing and directing construction projects from conception to completion including managing plumbing, electrical and waste management components of JCF projects;
- v. Secures the maintenance of an efficient and effective PMMD and the financial resources required in a cost-effective manner (safe, secure, well-maintained facility that meets environmental, health and security standards);
- vi. Provides written reports on work progress and budget adherence (issues) to Director PMMD; and
- vii. Appropriately and effectively responds to emergencies, work delays and other project construction and maintenance problems.

OUTSTANDING, UNACCEPTABLE OR EXTRA WORK

Attached:

- **Addendum A:** speaks to a list of items which are either **incomplete or deemed poor-quality work** and are not in compliance with the Conditions of the Contract.
- **Addendum B:** lists change of scope. No additional work can be carried out, until the change request is honoured by both parties. Effective date of this certificate shall be extended by the amount of additional time forecasted by the Contractor to complete the change of scope.
- ***Defects Liability Period of one(1) year from completion date***

PMMD’S Routine/Preventative Maintenance Schedule and Checklist														
NAME OF FACILITY/STATION:														
Date:														
TASK	Frequency	Performed by	Ja n	Fe b	M ar	Ap r	M ay	Ju n	Jul	Au g	Se p	Oc t	No v	De c
Building Interior														
Structure - check for cracks and defects in wooden and concrete buildings	annual	PMMD	X											
Windows -clean, re-caulk if needed, replace broken windows, missing louver blades, check to ensure proper operation	annual	PMMD	X											
Doors— clean, check weather stripping, re-paint as needed, check locking mechanisms, check to ensure proper operation	annual	PMMD	X											
Painting- wash off handprints and dirt in high traffic area, paint defaced wall and repaint burnt out colour if necessary	annual	PMMD	X											
Tiling; Check for damaged Floor and wall tiles	annual	PMMD	X											
Building Exterior														
Roof - clear debris off flat areas and from drains/scuppers, monitor condition for cracking, water pooling, leaks, loose flashing	monthly	PMMD	X	X	X	X	X	X	X	X	X	X	X	X

Roof - remove moss off sloped areas, clear debris from gutters/downspouts	monthly	PMMD	X	X	X	X	X	X	X	X	X	X	X	X	X
and preform termite treatment if necessary	monthly	PMMD	X	X	X	X	X	X	X	X	X	X	X	X	X
Roof															
check for cracks and leak in slab roofing and repair as needed	annual	PMMD	X												
Clear debris off flat areas and from drains/scuppers, clean monitor condition for cracking, leaks, loose flashing	monthly	Groundsman	X	X	X	X	X	X	X	X	X	X	X	X	X
Remove moss off sloped areas, clear debris from gutters/downspouts	annual	PMMD	X												
inspect for pests	annual	PMMD	X												
Monitor for cracking, and damaged roofing, repair and repainting if necessary	annual	PMMD	X												
Inspect for pests and preform termite treatment if necessary	Annual	PMMD	X												
check for damaged and broken lumber, replace as needed															
Carpentry															
Check for defective wooden cabinets and repair, stain and repaint if necessary	Annually	PMMD	X												
Plumbing															

Toilets - check for leaks, running water	bi-annually	PMMD	X							X					
Check faucets and shower heads, drains, kitchen and bathroom cabinets, toilets for leaks, etc.	Annually	PMMD	X												
Drainage - check for blocked drainpipes and clear away debris if necessary	bi- annually	Groundsman	X							X					
Sewage - check for full, near full and overflowing septic tanks	Monthly	Groundsman	X	X	X	X	X	X	X	X	X	X	X	X	X

Landscaping and Grounds															
Shrubs and Trees - remove broken, dead, deformed, deranged branches	weekly/seasonal	Groundsman	xx xx	xx xx	xx xx	xx xx	xx xx	xx xx	xx xx	xx xx	xx xx	xx xx	xx xx	xx xx	xx xx
Pest and disease control - monitor and follow Integrated Pest Management and Natural Gardening principals. Do not use products harmful to environment or beneficial critters	Monthly	PMMD	X	X	X	X	X	X	X	X	X	X	X	X	X
Walks, Paving, Curbs--monitor condition, clean and repair as needed	Monthly	PMMD	X	X	X	X	X	X	X	X	X	X	X	X	X
Parking Lot - monitor condition, clean and reseal as needed	Annual	PMMD					X								
Fence --monitor condition, repair, clean and repaint as needed	Annual	PMMD					X								
Electrical															
External Lighting --clean fixtures, replace lamps, tubes and bulbs as needed	bi- annual	PMMD	X							X					

Internal Lighting --clean fixtures, replace lamps, tubes and bulbs as needed	bi- annual	PMMD	X							X					
Plugs and switches - meter test, replace damaged and defective plugs and switches if needed.	bi- annual	PMMD	X							X					
Breaker Panel - operation check, replace defective and damaged breakers, if necessary, ensure cover is secured to panel, check for rust and rectify corroded and burnt wires, upgrade breaker size, if necessary, check for low voltage	bi- annual	PMMD	X							X					
Pot Head, service line, meter, meter post - check for D-Iron secured to building, check for loose hanging service line, check meter for rust and moisture	bi- annual	PMMD	X							X					
Exposed Wires- Check and replace damaged, chafed and exposed wires	bi- annual	PMMD	X							X					
Fire Extinguishers- Check expiry date, ensure the necessary personnel are contacted for servicing of the fire extinguisher	annual	PMMD	X

Overall Evaluation of Facility

Facility Section	Accumulative Grade	Actual Grade
Site Condition	50	
Roofing	30	
Interior Condition	65	
Exterior Wall Surfacing	35	
Electrical	55	
Plumbing	30	
Total	265	

CALCULATE THE OVERALL PERCENTAGE FOR THE FACILITY

$$\frac{\text{TOTAL ACTUAL GRADE}}{\text{TOTAL ACCUMULATIVE GRADE}} \times 100 = \text{OVERALL PERCENTAGE GRADE} \quad \times 100 = \quad \%$$

The Overall Percentage Grade for the facility will be the determinant of the frequency of inspection categorized as follow:

Monthly: 0 – 40%

Quarterly: 41 – 70%

Bi – Annual: 71 – 100%
