1.0 Introduction

Over the years, the Jamaica Constabulary Force (JCF) has been plagued with various challenges in relation to the structured quality management of its Fleet. To this end, the Quality Management Unit (QMU) of Transport Management and Maintenance Division (TMMD) will be established to mitigate against previous and emerging challenges and to meet and maintain international standards.

The establishment of this Unit serves as a demonstration of our commitment to embrace the mantra “People, Quality, Technology”. This unit is necessary to provide strategic oversight as it relates to the adherence to established Quality Management System (QMS), policies, processes and guidelines at TMMD as well as to hold our outsource partners for goods and services provided to us accountable in accordance with the established framework agreement. Additionally, drivers of the JCF units will be held accountable for their misuse and mismanagement as well as their unprofessional driving behaviors.

2.0 Purpose

The purpose of the QMU is to address the quality objectives, framework, protocols, and responsibilities necessary to achieve and maintain the highest quality standards in line with JCF’s Quality Management System. It is intended to support the continuous improvement of TMMD's processes and services.

3.0 Quality Policy

TMMD is committed to delivering high-quality services and products while ensuring customer satisfaction and compliance with legal and regulatory requirements. Our quality policy promotes a culture of continuous improvement, stakeholder involvement, and effective resource management.

4.0 Abbreviations and Acronyms

CAPA	Corrective and Preventive Actions
ITT	Information Technology Technician
JCF	Jamaica Constabulary Force
MT	Master Technician
QMP	Quality Management Policy
QMS	Quality Management System
QMU	Quality Management Unit
SSP	Senior Superintendent of Police
TMMD	Transport Management and Maintenance Division
WT	Workshop Technicians

5.0 Objectives

- 5.1 Maintain vehicle readiness: Achieve and maintain a vehicle operational readiness rate of 70%.

- 5.2 Enhance customer satisfaction: Attain a satisfaction rating of above 80% from internal clients .
- 5.3 Maintain service efficiency: Maintain the turnaround time for vehicle repairs as follows: -

Minor Repairs	Major Repairs	Major Long-Term Repairs	Accident Repairs
1-3 Working days	3-21 Working Days	3-10 weeks	Please see appendix 1

- 5.4 Ensure compliance: Maintain 70% compliance with established safety, administrative and operational standards.

6.0 Scope of the Quality Management System

The QMS encompasses all activities related to security of the division, maintaining records of all government properties, management of vehicle repair orders, parts distribution and retail operations. Administrative work, including oversight of all workshop Technicians and outsourcing management for 80% of motor vehicle servicing and repairs, as we move towards the transformation of TMMD as a Fleet Management entity.

7.0 Quality Management Unit (QMU) - Structure & Responsibility

7.1 Quality Manager:

- 7.1.1 Person of or above the rank of Inspector of Police
- 7.1.2 Responsible for overseeing the implementation of the QMP
- 7.1.3 Monitoring of the QMS, policies, processes and guidelines at TMMD
- 7.1.4 Reporting to Senior Superintendent of Police (SSP) in charge of TMMD.
- 7.1.5 Visit or cause frequent visits to authorized garages where processes can be observed and samples taken/documented via logs Photographs etc. and report on each visit.
- 7.1.6 Provide timely update on the risk appetite of established plans

7.2 Master Technician (MT) QMU:

- 7.2.1 This is the Chief Technician assigned to the (QMU)
- 7.2.2 Responsible for accompanying the Quality Manager on site visits including Authorized garages, Divisions and outsource partners periodically where processes can be observed and samples taken/documented via logs Photographs etc.
- 7.2.3 Assign units for internal repairs to Workshop Technicians and assign designation to each unit based on assessment. For example, minor repairs,

major repairs or major long-term repair (NB in his/her absence, the workshop technician assign to the QMU will act on his behalf)

- 7.2.4 Report to the QM any concerns with regards to any break down or potential break down in the processes.
- 7.2.5 Test new products
- 7.2.6 Provide technical guidance to all Workshop Technicians

7.3 Workshop Technician (WT) QMU

- 7.3.1 This is the workshop technician assign to the QMU and in collaboration with the Chief Workshop Manager of the Division will inspect and document defects before vehicles are sent to authorized garages.
- 7.3.2 Inspect and test drive units returning from authorized garages after repairs
- 7.3.3 Verify whether job done is completed satisfactorily
- 7.3.4 Approve completion
- 7.3.5 This said technician is responsible for reporting directly to the MT any concerns with regards to any break down or potential down in the process

7.4 Administrative Staff:

- 7.4.1 Two (2) Data Entry Clerks Responsible for documentation and record-keeping.
- 7.4.2 Monitoring alerts in relation to turnaround time reflected on the data base and update the workshop technician assign to the vehicle concern (please see 9.3 under Performance Measurement monitoring Mechanism using Technology).

7.5 Information Technology Technician (ITT)

- 7.5.1 Monitor the newly proposed Vehicle Management System (VMS)
- 7.5.2 Be able to address technical issues relating to the system
- 7.5.3 Work remotely when required to update the system and address issues with his/her master laptop
- 7.5.4 Be ready to solve IT related challenges whenever called up on.

8.0 Quality Assurance Processes

8.1 Performance Measurement

- 8.2 Key performance indicators (KPIs) will be established and monitored, including:
 - a) Vehicle readiness percentage.
 - b) Customer satisfaction ratings.
 - c) Average repair turnaround time.
 - d) Compliance issues/ audit findings.

9.0 Performance Measurement Monitoring Mechanism using Technology

- 9.1 Vehicle readiness percentage. -In order to Monitor and manage Vehicle operational readiness rate of 70%, the Current Vehicle management System (VMS) data base is being used
- 9.2 Customer satisfaction ratings -In order to monitor and manage the attainment of Customer satisfaction rating of or above 80% from internal clients, Transport Sub officers (TSO) should be asked to rate their satisfaction level using the newly created data base prior to receiving the gas card. (NB) This should be mandatory & should take no more than 3 minutes to complete). The said data base should have a column to rate authorized garages.
- 9.3 Average repair turnaround time. -In order to monitor and manage the Average repair turnaround time. (The same newly created Data- base should be able to alert Workshop technicians on vehicles that threaten to fall behind the allotted turnaround time based on the designation/ category as follows:

Minor Repairs	Major Repairs	Major Long-Term Repairs	Accident Repairs
1-3 Working days	3-21 Working Days	3-10 Weeks	Please see Appendix 1

- 9.4 Compliance issues/ audit findings. -In order to monitor and manage the standards as it relates to Compliance issues and audit findings, the following should be adopted.
- 9.5 Audit Compliance Check list (table to be created in proposed new data base for monitoring purpose aimed at maintaining standards.
- 9.6 Audit Non- Compliance Check list (Table to be created in proposed new data base for monitoring nonconformity aimed at meeting compliance standards.

N.B these tables should be updated after each audit. Status between compliance and non-compliance should change between audits, if necessary, without disrupting the ability to see the History. This will help us to monitor our performance from audit to audit and allow the division to take steps to address compliance issues A remarks column must be on the check list.

10.0 Corrective and Preventive Actions (CAPA) Checklist

A CAPA system will be in place to address non-conformity based on internal Audits or .observation. This non- conformity may be safety related, administrative or operational. Any identified issues will be documented, analyzed, and resolved. Likely threats to achieving any acceptable standard will be proactively addressed. The proposed new data base should have a separate section to document this information similar to the Audit Non- Compliance Check list.

Additionally, an annual Risk Management assessment will be done to determine the risk appetite of the various acceptable standards and best practices. This assessment will guide our risk mitigation strategies. This activity will impact on TMMD's ability to meet our quality objectives.

11.0 Document Control/Records Management

- 11.1 All documents, including repair orders, records of vehicle movement, gas cards, parts distribution, and administrative documents, storage mechanism will be reviewed periodically and revised if necessary. Verify daily logs of vehicle movements monthly.
- 11.2 Master Technician will review workshop technician's activity reports detailing repairs and services performed. Parts will continue to be issue via the Delivery Receipt Book which is related to the parts in question. For example for electrical parts, electrical book will be used; for transmission parts, transmission book will be used; for heavy duty parts; heavy duty book will be used.

12.0 Training and Competence

Regular review of training programs will be conducted to identify strengths, weaknesses and its capacity to deal with current and emerging challenges. This is aimed at meeting the quality standards and safety protocol. Skilled bank will be monitored and maintained to ensure compliance with ongoing education requirements.

Regularly review and update emergency response plans and procedures to ensure effectiveness and relevance. Conduct quarterly drills to ensure staff is well-prepared for various scenarios, thereby improving overall operational readiness.

13.0 Management Review

The management team will conduct annual reviews of the QMP, considering performance data, customer feedback, audit findings, and other relevant information to make informed decisions for resource allocation and continuous improvement.

14.0 Continuous Improvement

TMMD is committed to the ongoing improvement of its quality management system through an iterative process of evaluation, feedback incorporation, corrective actions, and capacity building.

15.0 Communication

Internal communication will be established to promote awareness of the QMP among employees. Regular meetings will be held to update staff on quality objectives, progress, and strategies to overcome challenges.

16.0 Legislative Authority/Guiding Principles

This Policy should be read in conjunction with the following:

- 16.1 Public Procurement Act, 2015
- 16.2 Public Procurement (Amendment) Act-2018 (N.B should be read and construed as one with the Public Procurement Act, 2015, which is the principal Act)
- 16.3 Vehicle Servicing/Repair Scheduling procedures
- 16.4 Authorized garages Framework Agreement.
- 16.5 TMMD Stores Standard Operating procedures (SOP)
- 16.6 TMMD Divisional Plan 2024
- 16.7 Occupational Health & Safety Plan

- 16.8 Turnaround Time for Accident Repairs
- 16.9 Government of Jamaica Revised Comprehensive Motor Vehicle Policy for the Public Sector (Ministry of Finance and the Public Service June 19, 2017)
- 16.10 Jamaica Constabulary Force Quality Statement
- 16.11 Transport Management & Maintenance Division Preventative Maintenance S.O.P.

Appendix 1

a. Turnaround Time for Accident Repairs

Over the years, the turnaround time for the repairing of vehicle that are involved in accident has fluctuated as a result of several variables such as nature and extent of accident, other agencies and partners involve in the process among other things. However, while we still have these variables present, and cannot guarantee a turnaround time for the entire process, we at TMMD can implement turnaround time for aspects of the process under our direct control. The following is a layout of the entire repair process. Each aspect under our direct control will be given a turnaround time as indicated below:-

- Collision report must be forward to TMMD within 24hrs of incident. It is imperative that the report is sent, because without same, the process is delayed. **(Recommendation:** Soft copy of accident reports is forwarded to TMMD to speed up the repairs process, as hard copy of reports may take some time in reaching TMMD.

b. The following timeline are as follows:

- i. On receipt of report, a quotation is requested from an independent assessment to be done on the service vehicle by an approved assessor **(7 working days)**
- ii. On receipt of quotation from independent assessor same is forwarded to cooperate & special services via SSP. TMMD for a Purchase order to be generated. **(7 working days)**
- iii. On receipt of Purchase Order from cooperate & special services, same is forwarded to independent assessor for assessment to be done. **(7 working days)**
- iv. Assessment report is received from assessor
- v. Based on the assessment report received the feasible for repairs is done and a decision is made if repairs are to be done and if internally or at external repairers. **(7 working days)**
- vi. An estimate of repairs is requested from external repairer/s if same will be done externally. **(2 working days)**
- vii. File is then compiled and submitted to ACP I/C Support Services Branch through SSP. I/C TMMD for approval for repairs to be done. **(10 working days)**
- viii. On approval, repairs are done.
